Amendments to the Claims: This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

- (Original) A polyester comprising a macromeric unit, wherein the macromeric unit comprises;
   (a) at least two lactone derived units;
  - (b) an initiating core; and
  - (c) a coupling unit.
- 2. (Original) The polyester of claim 1, wherein the initiating core is linking the at least two lactone derived units to form a macromerdial.
- 3. (Original) The polyester of claim 1, wherein the coupling unit is linking a plurality of macromerdials.
- 4. (Original) The polyester of claim 1, wherein the coupling unit and the initiating core have a carbon chain of a length sufficient to alter hydrophobicity of the polyester and thereby enable the polyester to degrade according to a surface erosion mechanism.
- 5. (Original) The polyester of claim 1, the polyester having the structural formula:

wherein A is a lactone derived unit, B is the initiating core, C is the coupling unit, m is a number of repeats from about 4 to about 60, and x is a number of macromeric units from 1 to about 100.

- 6. (Original) The polyester of claim 5, wherein m is 10 to 40.
- 7. (Original) The polyester of claim 5, wherein A is represented by at least one of the formulas:

$$-[-(R_2)-C(=0)-O-]-$$
 and  $-[-O-C(=0)-(R_2)-]-$ 

wherein  $R_2$  is at least one of  $C_1$ - $C_8$  alkyl and a substituted  $C_1$ - $C_8$  alkyl having at least one carbon substituted with an aromatic group and/or a heteroatom.

- (Currently Amended) The process polyester of claim 5, wherein the at least two lactone derived units constitute about 10% to about 99% of the polyester.
- 9. (Currently Amended) The process polyester of claim 8, wherein the at least two lactone derived units constitute 50% to 99% of the polyester.
- (Currently Amended) The process polyester of claim 5, wherein the lactone derived unit
  has a number average
  molecular weight of about 50 to about 12,000.
- 11. (Currently Amended) The process <u>polyester</u> of claim 10, wherein the number average molecular weight is 50 to 6,000.
- (Currently Amended) The process polyester of claim 10, wherein the number average molecular weight is 50 to 2,000.
- 13. (Original) The polyester of claim 5, wherein B is represented by the formula:

-[R<sub>1</sub>]-

wherein  $R_1$  is a member selected from the group consisting of a  $C_2$ - $C_{14}$  linear alkyl, a substituted  $C_2$ - $C_{14}$  alkyl having at least one substituent group, a  $C_2$ - $C_{14}$  heteroalkyl, a  $C_2$ - $C_{14}$  branched alkyl, an alkyl having at least one unsaturated bond, and a polymer.

14. (Currently Amended) The polyester of claim 13, wherein  $R_1$  is a member selected from the group consisting of  $C_6$ ,  $C_8$ ,  $C_{10}$  and  $C_{12}$  alkyls, a poly(ether), poly(ethyleneglycol), poly(amine), poly(propyleneoxide), a block ABA copolymer of poly(oxyethylene) and poly(oxypropylene).

15. (Original) The polyester of claim 5, wherein D is represented by the formula:

$$[-C(=O)-(R_3)-C(=O)-]$$

wherein R<sub>3</sub> is a C<sub>4</sub>-C<sub>10</sub> aliphatic or aromatic group.

- 16. (Original) The polyester of claim 15, wherein  $R_3$  is a member selected from the group consisting of  $C_4$ ,  $C_6$ ,  $C_8$ , and  $C_{10}$  alkyls.
- 17. (Original) The polyester of claim 1, wherein the polyester has a molecular weight from about 20 KDa to about 120 KDa.
- 18. (Currently Amended) A polyester comprising a macromeric unit, wherein the macromeric unit comprises:
  - (a) at least two lactone derived units;
- (b) an initiating core, wherein the <u>a</u> diol derived unit is linking the at least two lactone derived units to form a macromerdiol; and
- (c) a coupling unit, wherein the coupling unit is linking a plurality of macromerdiols and wherein the coupling unit and the diol derived unit have a carbon chain of a length sufficient to alter hydrophobicity of the polyester and thereby enable the polyester to degrade according to a 25 surface erosion mechanism.
- 19. (Original) The polyester of claim 18, wherein at least one of the at least two lactone derived units is a  $C_1$ - $C_8$  alkyl or a substituted  $C_1$ - $C_8$  alkyl, wherein at least one carbon is substituted with an aromatic group and/or a heteroatom.
- 20. (Currently Amended) The polyester of claim 18, wherein the initiating core is a member selected from

the group consisting of  $C_6$ ,  $C_8$ ,  $C_{10}$  and  $C_{12}$  alkyls, a poly(ether), poly(ethyleneglycol), poly(ethyleneglycol), poly(amine), poly(propyleneoxide), a block ABA copolymer of poly(oxyethylene) and poly(oxypropylene).

21. (Original) The polyester of claim 18, wherein the coupling unit is derived from C6-C12

aliphatic or aromatic diacyls.

(Original) A process of making the polyester of claim 1, the process comprising:

providing a lactone;

providing a diol;

providing a coupling agent;

reacting the lactone with the diol in a presence of a catalyst to form a macromerdiol; and reacting the macromerdiol with the coupling agent to form the polyester.

- 23. (Original) The process of claim 22, wherein the lactone and the diol are provided at a first molar ratio of from about 5 to about 120.
- 24. (Original) The process of claim 22, wherein the lactone and the diol are provided at a first molar ratio of about 5 to about 60.
- 25. (Original) The process of claim 22, wherein the macrodiol and the coupling agent are provided at a second molar ratio of about 1 to about 20.
- 26. (Original) The process of claim 22, wherein the catalyst is a member selected from the group consisting of tin(II)-2-ethylhexanoate, aluminum isopropoxide, salts and oxides of vttrium and lanthanide.
- 27. (Original) The process of claim 22, wherein the lactone is a member selected from the group consisting of lactones of alpha-hydroxy acids, lactones of beta-hydroxy acids, lactones of omega-hydroxy acids, lactones of gamma-hydroxy acids, lactones of delta-hydroxy acids, lactones of epsilon-hydroxy acids, p-dioxanone, cyclic carbonates, optical isomers thereof, substituents and mixtures thereof.
- 28. (Original) The process of claim 27, wherein the lactone is a member selected from the group consisting of lactide, E-caprolactone, propiolactone, butyrolactone, valerolactone, p-dioxanone and depsipeptide.
- 29. (Original) The process of claim 22, wherein the diol has the following structural formula:

## HO-(R<sub>1</sub>)-OH

wherein  $R_1$  is a member selected from the group consisting of a  $C_2$ - $C_{14}$  linear alkyl, a substituted  $C_2$ - $C_{14}$  alkyl having at least one substituent group, a  $C_2$ - $C_{14}$  heteroalkyl, a  $C_2$ - $C_{14}$  branched alkyl, an alkyl having at least one unsaturated bond, and a polymer.

- 30. (Currently Amended) The polyester process of claim 29, wherein  $R_1$  is a member selected from the group consisting of  $C_6$ ,  $C_6$ ,  $C_{10}$  and  $C_{12}$  alkyls, a polyether, polyethylenglycol, polyamine, polypropyleneoxide, block ABA copolymers of poly(oxyethylene) and poly(oxypropylene).
- 31. (Original) The process of claim 22, wherein the coupling agent is an acyl halide.
- 32. (Original) The process of claim 31, wherein the coupling agent is a diacyl chloride derived from adipic acid, suberoic acid, sebacic acid, or dodecanoic acid.
- 33. (Original) A device manufactured from the polyester of claim 1.
- 34. (Original) The device of claim 33, wherein at least a part of the device is adapted to be implanted in a body.
- 35. (Original) The device of claim 33, wherein the at least a part of the device is adapted to deliver a bioactive agent.
- 36. (Original) The device of claim 35, wherein the bioactive gent is a member selected from the group consisting of an antibody, a viral vector, a growth factor, a bioactive polypeptide, a polynucleotide coding for the bioactive polypeptide, a cell regulatory small molecule, a peptide, a protein, an oligonucleotide, a gene therapy agent, a gene transfection vector, a receptor, a cell, a drug, a drug delivering agent, nitric oxide, an antimicrobial agent, an antibiotic, an antimictotic, an antiecrotry agent, an anti-cancer chemotherapeutic agent, steroidal and non-steroidal anti-inflammatories, a hormone, an extracellular matrix, a free radical scavenger, an iron chelator, an antioxidant, an imaging agent, and a radiotherapeutic agent.
